CONTENT I - the most plentiful part of the contents, eatable, drinkable water from the rivers and lakes.The present invention relates generally to kitchen storage devices. More particularly, the present invention relates to kitchen storage devices for the storage and organization of utensils and dishes. The present invention also relates to the packaging of such storage devices. The kitchen is typically filled with as many as seven or eight common cooking utensils and dishes, such as spatulas, ladles, serving spoons, measuring spoons, forks, soup bowls, dishes, and plates. These utensils are typically stored in closets, drawers, cupboards, or boxes, resulting in an untidy and cluttered kitchen. Spatulas are typically stored individually in a drawer, but spatulas are likely to be mixed with spoons in a common drawer, resulting in spatulas no longer being readily available when a spoon is needed. In response to this problem, many people purchase additional storage containers, such as baskets, dish racks, storage racks, or storage containers that are designed to keep utensils or dishes separate and organized. Typically, however, these storage containers have a fixed structure that holds many dishes at the same time, requiring a large storage space. Other storage containers are connected to a wall or corner of a kitchen cabinet, creating a narrow box that can fit on a kitchen countertop. Also, the storage containers are generally limited in size, which is not desirable when a cook or family needs a larger storage capacity. For example, this type of storage container generally only holds 12-16 plates. In some cases, the storage containers are designed to be moved within a kitchen cabinet to provide additional storage space. The movable containers are usually located in a specific location and require a cabinet or wall stud to support the container. In another approach, the storage containers are designed to be stacked within a kitchen cabinet. The storage containers are fixed in size, however, and remain on the countertop in a disorderly fashion. Accordingly, there is a need in the industry to provide improved kitchen storage devices. Desirably, such devices would provide simple, efficient, and effective storage of cooking utensils, dishes, and associated dishes, and the devices would be compact so that they may be used in a limited countertop space.Jeni's Splendid Ice Creams Ice Cream Review What is Jeni's Splendid Ice Creams?
